

Allianz Strategy 75 - CT - EUR

Mixed fund concentrating on equities

Investment Objective

The fund invests to a variable extent in international equity markets and in the market for euro bonds. Applying a quantitative approach, fund management lowers the investment in stocks in phases of high market volatility and raises it in phases of low volatility. Overall, it strives to achieve a return that is comparable to the return of a mixed portfolio investing 75% in international stocks and 25% in medium-term euro bonds.

Fund Manager

Cordula Bauss
(since 06/01/2018)

Performance

Over 10 Years ¹

Annual Performance (%) ¹

	Fund
12/31/2012 - 12/31/2013	22.77

Average nominal return (%)	1.51
Yield to worst (%) ¹¹	2.45
Average rating	AA-

Opportunities

- + High return potential of stocks in the long run
- + Steady interest income on bonds, capital gains opportunities on declining interest rates
- + Broad diversification across numerous securities

Risks

- High volatility of stocks, losses possible. The fund unit price may be subject to increased volatility.
- Interest rates vary, bonds suffer price declines on rising interest rates
- Limited participation in the yield potential of single securities

FOR FUND DISTRIBUTORS AND PROFESSIONAL INVESTORS ONLY

- 1) Calculated at the net asset value, excl. front-end load, distributions reinvested. Calculation according to method as defined by BVI, the German Fund Companies Association. **Any front-end loads reduce the capital employed and the performance.** All performance data since 02/12/2002 of Allianz Strategy 75 - CT - EUR prior to the launch date, 01/07/2008 refer to another investment fund. This does not imply that Allianz Strategy 75 - CT - EUR will experience a similar performance in the future. All share classes/investment funds mentioned above are based on the same investment objectives and strategies as well as risk profiles and fee structures. Past performance does not predict future returns
- 2) SFDR: EU Sustainable Finance Disclosure Regulation. Information accurate at time of publishing.
- 3) The Sharpe ratio states the relationship between the return generated by the fund and the investment risk. The fund's excess return versus the risk-free market rate is compared to volatility. Negative values are not meaningful.
- 4) Volatility measures the fluctuation range of the fund's performance over a specified period of time.
- 5) This is for guidance only and not indicative of future allocation.
- 6) For derivatives, economic exposure of the instruments is considered.
- 7) The Fund may be leveraged and aims at an investment ratio of not more than 125%.
- 8) Volatility target management component was added in Q3 2009. The volatility target is currently set at 12%.
- 9) The all-in fee includes the expenses previously called management, administration and distribution fees. Any payment of a trail fee by the management company to a distribution partner will be effected from the all-in fee.
- 10) TER generally: Total cost (except transaction costs) charged to the fund during the last financial year. TER for funds-of-funds: The costs incurred by the fund itself (except transaction costs). Since the fund held other investment units ("target funds") in the reporting period, further costs, charges and fees may have been incurred at the level of the target fund.
- 11) Represents the lowest potential yield that an investor could theoretically receive on the bond up to maturity if bought at the current price (excluding the default case of the issuer). The yield to worst is determined by making worst-case scenario assumptions, calculating the returns that would be received if worst-case scenario provisions, including prepayment, call or sinking fund, are used by the issuer (excluding the default case). It is assumed that the bonds are held until maturity and interest income is reinvested on the same conditions. Calculation is before currency hedging. The yield to worst is a portfolio characteristic; in particular, it does not reflect the actual fund income. The expenses charged to the fund are not taken into account. As a result, the yield to worst is not suitable as an indicator of the future performance of a bond fund. Forecasts are not a reliable indicator of future results.

Disclaimer

Investing involves risk. The value of an investment and the income from it may fall as well as rise and investors might not get back the full amount invested. Investing in fixed income instruments may expose investors to various risks, including but not limited to creditworthiness, interest rate, liquidity and restricted flexibility risks. Changes to the economic environment and market conditions may affect these risks, resulting in an adverse effect to the value of the investment. During periods of rising nominal interest rates, the values of fixed income instruments (including positions with respect to short-term fixed income instruments) are generally expected to decline. Conversely, during periods of declining interest rates, the values of these instruments are generally expected to rise. Liquidity risk may possibly delay or prevent account withdrawals or redemptions. Allianz Strategy 75 is a sub-fund of Allianz European Pension Investments SICAV, an open-ended investment company with variable share capital organised under the laws of Luxembourg. The value of the units/shares which belong to the Unit/Share Classes of the Sub-Fund that are denominated in the base currency may be subject to an increased volatility. The volatility of other Unit/Share Classes may be different and possibly higher. Past performance does not predict future returns. If the currency in which the past performance is displayed differs from the currency of the country in which the investor resides, then the investor should be aware that due to the exchange rate fluctuations the performance shown may be higher or lower if converted into the investor's local currency.
